

Stuff to explore / look up

3NT

1. USER
2. SERVER SIDE
3. DATABASE

Client-side

1. Ajax - adverts/show
2. HTTPS - website
3. Cross browser support
4. Bootstrap
5. jQuery
6. Prototype/scripticulous
7. mooTools - UI rendering
8. ThingStar

Server-side

1. Database
2. Server side logic java (frameworks)
3. Php
4. OSGi container - used for modules to separate functionality.
5. Glassfish
6. DBMS postgresSQL
7. Telnet

Front end

- Daniel Rocha
- Tosin

Back end

- Tlou
- Fiwa

1. Technologies FTP, phpmyAdmin, using Sql server, html and ftp

2. Is it blackboard architecture?
services orientated?

3. Reusability

4. Name of subsystems?

5. 3Ntier logic tier,
the presentation tier, and
the data tier.

Architectural structure vs model.

3Tier do you mean a database.

whats technologies used to connect to server
architectural is a firmware,,, so hope
something like this....

framewaork we designing spmthing like this
.Cant use client server 2 tier vs 3tier.... as it
has more stuff to deal with.

Presentation vs data. ==== we have 5 layers.
